CAMERON REMESZ

FRONT-END WEB DEVELOPER

PROFESSIONAL SUMMARY

I'm a front-end web developer with a heavy focus on solving business problems through critical thinking and teamwork. With a background in commercial/retail management I use my communication and decision making skills to help any team execute their goals. I use a client first approach to build accessible, engaging and responsive web sites and applications.

SKILLS

- Angular
- TypeScript
- RxJS
- JavaScript
- SASS
- React
- Firebase
- Git/GitHub/GitFlow
- Cypress
- Java/Selenium
- REST APIs
- Agile/Scrum

EDUCATION

Juno College Of Technology Bootcamp
Graduation Certificate | Aug 2021 - Oct 2021

Studied HTML, CSS, SASS, JavaScript, REST APIs, Firebase, Git/GitHub, Web Accessibility, Responsive Design, Wireframing/Prototyping, Paired Programming, Team Collaboration, Public Speaking, Technical Communication

PROJECTS

Pulse Loyalty - View Live Project | Github Repo
JavaScript, Firebase Realtime Database, Firebase Authentication & Hosting, CSS, HTML
A discount tracking app used to track discounts for real customers. Built using vanilla JavaScript with Google Firebase for user authentication/data storage. This app is for a mobile mechanic company as an internal tool to help build customer retention and increase profits.

Chatter - View Live Project | Github Repo
React, Sass, Firebase Auth, Firebase Realtime Database
A real-time chat app where the user must log in with google, has the ability to send a message and also clear the entire chat. Built using React hooks and functional components connecting to Firebase services to implement persistent data/authorization and hosted on Netlify.

Global Weather Watch - View Live Project | Github Repo
HTML, CSS, jQuery, Open Weather Map, Unsplash & Mapbox APIs
A user searches a city to return the current weather, a map view and a background image of the searched city. Built using name spacing, passing data returned from an API call to the next, error handling and hosted on GitHub pages.

PROFESSIONAL HISTORY

Operations Manager
MicroMech (Start Up) | Jun 2019 - Jun 2021

I reported directly to the CEO helping to build multiple teams by implementing policies and analyzing business financials. I did this by building a profit and loss statement from their database using SQL . I also worked alongside the CMO, CTO and developer team to help with app development and marketing strategies.

Junior Front-End Developer
ZIRO Technologies | Mar 2022 - Present

I helped grow the customer base and increase customer satisfaction by implementing new features, updating application branding and converting AngularJS pages to Angular. I improved developer experience and decreased development time within the test application by implementing a mock database (idb-keyval) alongside an API mocking library (MSW) allowing for dynamic data not based on rigid stubs. I maintained code quality & coverage by writing e2e and unit tests in Java with Selenium.
