CAMERON REMESZ

FRONT-END WEB DEVELOPER

PROFESSIONAL SUMMARY

I've worked as a front-end web developer for 4 years, 2 of them professionally with Angular. I put a heavy focus on solving business problems through critical thinking and teamwork. With a background management I use my communication, decision making and organizational skills to efficiently build and maintain quality software with teams. I use a user/client first approach to ensure quality UI/UX and fulfill business requirements and increase profit.

SKILLS

- Angular
- TypeScript
- RxJS
- JavaScript
- SASS
- React
- Firebase
- Git/GitHub/GitFlow
- Cypress
- Java/Selenium
- REST APIs
- Agile/Scrum

EDUCATION

Juno College Of Technology Bootcamp
Graduation Certificate | Aug 2021 - Oct 2021

Studied HTML, CSS, SASS, JavaScript, REST APIs, Firebase, Git/GitHub, Web Accessibility, Responsive Design, Wireframing/Prototyping, Paired Programming, Team Collaboration, Public Speaking, Technical Communication

PROJECTS

Poorcast - View Live Project | Github Repo
Angular, TypeScript, NgRx (Redux), RxJS, Cypress, Github Actions, Product Development Lifecycle
A budget application used to improve my front-end skillset with enterprise state management and reactive forms. This gave me insight into prototyping, design, user stories, feature requests, managing scope creep, state management, authentication, CI/CD and automated testing.

Chatter - View Live Project | Github Repo
React, Sass, Firebase Auth (Google), Firebase Realtime Database
A real-time chat app with Google authentication. Built using React hooks, functional components and Google Firebase services to implement persistent data/authorization. Hosted on Netlify.

NgRx Reactive Forms - View Live Project | Github Repo
Angular (Reactive Forms), TypeScript, NgRx (Redux), Tailwind
A todo app built on my free time to learn the redux pattern of state management. My company was looking at it as an alternative to the "Service with a Subject" pattern but ultimately did not switch. I used Tailwind as I was already familiar with Bootstrap and used the reactive forms framework to stay up to date with Angular features as my company used a handmade forms framework.

PROFESSIONAL HISTORY

Junior Front-End Developer
ZIRO Technologies | Mar 2022 - Present

I helped grow customer base and increase customer satisfaction/retention by implementing requested features, components and pages. I spearheaded updating application branding/styling to ensure brand cohesiveness & marketability. I migrated legacy AngularJS pages to Angular. I improved developer experience and decreased development time in the test application by implementing a mock database (idb-keyval) and an API mocking library (MSW). I maintained code quality & coverage by writing tests in Java with Selenium. I contributed to productivity of other company teams by building internal tooling by streamlining manual processes.

Operations Manager
MicroMech | Jun 2019 - Jun 2021

I built our supply chain and analyzed business financials to create business plans. I created a profit and loss statement from their database using SQL to ensure profitability and reduce costs. I worked with the CMO, CTO and developer team to help with app development and marketing strategies.
